

We All Metabolize Drugs Differently... Based on DNA Passed Down to us by Our Ancestors

- ❑ Some patients metabolize certain medications too **slowly**, causing a drug to **accumulate**... placing them at risk of **toxicity**
- ❑ Others metabolize the same drug too **rapidly**, leaving little to no drug in their body to do it's job
- ❑ Depending on their Genes, certain drugs may have **adverse reactions** to other drugs they're taking
- ❑ In the **past**, Physicians had to try one drug for a while... then try different drugs... till they found the right one that worked best for their patients
- ❑ **Now**... with a **Simple Cheek Swab** a physician can know which drugs **will** work and which ones **won't**... **BEFORE** they even prescribe them
- ❑ **Play it SAFE:** Ask your Doctor for a **"Pharmacogenomic Test"**

- No Out-of-Pocket Cost For Insured Patients -

If your Doctor does not offer this test, call David @ (717) 283-7314

Right Drug – Right Dose – Every Patient – Every Time
